## Global Environmental Management Statement

**Our aim** is to improve our environmental performance through energy efficiency, effluent treatment, water use reduction and waste reduction, including food loss and food waste, thereby reducing the impact of our products and operations on the environment.

- **Sustainability** - We consider sustainability to be integral to what we do and are committed to accelerating our ESG performance. We will track and publish progress on our ESG priorities, including our energy usage/carbon footprint, water, waste reduction and packaging performance.
- **Environmental Impact** - We support the UN Sustainable Development Goals, and our ambition is to align with the Science Based Target Initiative. We are committed to continual improvement and the prevention of pollution.
- **Environmental Management Systems** - We aspire to have environmental management systems at all our main production sites to ensure that we have energy and environmental responsibility built into our operations, aligned to external standards (e.g., ISO 14001 standards).
- **Management Responsibility** - We will support and encourage our staff to carry out this policy by providing appropriate training, information, and support.
- **Laws and Regulation** - We will act in accordance with the spirit and letter of all appropriate environmental laws, regulations, applicable standards, and codes of practice.
- **Measurement** - We will set environmental objectives and targets and measure progress against these, reporting our performance to the Supervisory Board every twelve months.
- **Production Efficiency** - We will improve the efficiency of our operations by ensuring we extract the most from our resources, thereby reducing waste as well as water and energy usage.
- **Corrective Action** - We will examine any environmental incident to identify its root cause and implement appropriate solutions.
- **Customers and Suppliers** - We will interact with suppliers and customers to lower the environmental effects of our supply chain.

**Harald van Boxel**  
Chief Executive Officer
