

DEVRO

Global Environmental Management Statement

Our aim is to improve our environmental performance through energy efficiency, effluent treatment, water use reduction and waste reduction, including food loss and food waste, thereby reducing the impact of our products and operations on the environment. We are committed to continual improvement and the prevention of pollution.

- **Sustainability** - We consider sustainability to be integral to what we do and are committed to accelerating our Environmental & Social Governance performance. We will track and publish progress yearly on our ESG priorities, including our energy usage/carbon footprint, water, waste reduction and packaging performance.
- **Environmental Impact** - We support the UN Sustainable Development Goals, and our sustainability targets are now validated by the Science Based Target Initiative. We will aim to obtain external validation of our footprint in accordance with ISO 14064 standards. We also commit to disclosure of our environmental efforts through third parties (e.g. CDP)
- **Environmental Management Systems** - We will maintain environmental management systems at all our main production sites to ensure that we have energy and environmental responsibility built into our operations, aligned to external standards (e.g. ISO 14001 standards).
- **Management Responsibility** - We will support and encourage our staff to carry out this policy by providing appropriate training, information, and support.
- **Laws and Regulation** - We will act in accordance with the spirit and letter of all appropriate environmental laws, regulations, applicable standards, and codes of practice.
- **Measurement** - We will set environmental objectives and targets and measure progress against these, reporting our performance to the Devro Management Team every quarter.
- **Production Efficiency** - We will improve the efficiency of our operations by ensuring we extract the most from our resources, reducing waste as well as water and energy usage.
- **Corrective Action** - We will examine any environmental incident to identify its root cause and implement appropriate solutions.
- **Customers and Suppliers** - We will interact with suppliers and customers to help them meet their sustainability goals thus lowering the environmental effects of our supply chain.

Harald van Boxel
Chief Executive Officer
